

Environmental policy

Production operations are central for Weland AB and are conducted in a manner consistent with sound environmental practice. We carry out effective environmental work by constantly developing our production processes to achieve better utilisation of materials and energy. Weland AB will endeavour to minimise its impact on the environment to achieve sustainable development. Weland AB's environmental programme will bring market-related and financial benefits, and customers will see us as an environmentally conscious option.

Mainstays for our quality work:

- Conserve energy and natural resources.
- Residual waste must be minimised, sorted at source and as far as possible recycled.
- Satisfy or exceed environmental requirements set out in laws and ordinances, and comply with other requirements that relate to us.
- Prevent environmental risks.
- Use modern technology.
