Environmental Policy

We manufacture products designed to last for generations, and we take responsibility for their entire life cycle. Weland aims to be the obvious environmental choice, and we are working towards climate-neutral operations. We are committed to protecting the environment and preventing pollution, complying with and striving to exceed applicable legislation and other binding requirements, and continually improving our environmental management system and environmental performance.

We achieve this by:

- Reducing our climate impact
  We reduce our climate impact through energy production from solar power, while also remaining open to new energy solutions that enable us to expand our own energy production. Geothermal energy and recovered energy from production are important sources for heating and cooling our premises and machinery. Investments in new technology are an important part of improving energy efficiency and are essential to making significant progress towards reducing our carbon footprint.
- Making efficient use of resources
  Weland makes efficient use of materials, and any surplus material is primarily reused or recycled. All waste is handled, transported and treated in an environmentally sound manner.
- Minimising chemicals and emissions
  Weland minimises its use of chemicals and eliminates those that are unnecessary. Emissions from our production processes are purified to the greatest extent possible.
- Managing environmental risks
  Environmental risks are identified and prioritised according to their severity, based on an assessment of their potential consequences and likelihood of occurrence. High-risk situations must always be managed in a way that limits or eliminates the risk of adverse environmental impact.
- Making decisions from a life-cycle perspective
  Life cycle assessments form the basis for our choices in production and product development, helping us achieve the best possible environmental performance.

  Our environmental policy forms the basis for our environmental objectives and is reviewed annually.
  Every employee plays a part in our environmental work.

Jonas Welandson
